I used to think that open source was just a fancy way of saying free software but I realized it is actually centered on user freedom and community collaboration. In the introduction of the story, William explains that open source lets users take back control of their own computers instead of relying on huge tech companies to decide what software can do. Learning about how linux and platforms like github connect millions of developers all around and it showed me how big open source has become. Even big corporations like microsoft and google rely alot on open source code. I also didn't realize how easy it is to replace expensive tools that are used on a daily with open source alternatives like GIMP or libreoffice without the need to switch operating systems right away. But overall it changed my perspective on how software is built and why open collaboration is so important for technology today
